HealthLine Systems Announces Significant Upgrade in ASP Hosting Infrastructure

February 5, 2009, San Diego, CA— HealthLine Systems announced today that the company will be moving its **EchoASP** hosted services to a new state-of-the-art off site location during the first quarter of 2009.

"We are very pleased to be able to offer our clients a secure, high speed environment to meet their growing and changing needs," said Dan Littrell, **HealthLine** CEO. "This new facility demonstrates our commitment to support our client organizations with the most advanced technology available."

Among the improvements are a secure facility that is staffed 24/7 with backup capabilities that provides weeks worth of emergency power. The facility provides significant advantages in internet peering with multiple internet providers to improve bandwidth performance while ensuring there are redundant carriers to reduce potential failure.

Coinciding with the move is an upgrade to the latest enterprise class Hewlett Packard C class Blade Systems for the database and application servers. The new servers provide a fully redundant infrastructure; Storage Area Network based storage; and updated networking equipment.

The previous ASP hosting site will remain in tact and serve as a hot backup to provide geographic redundancy between facilities.

"The new ASP hosting facility provides our **Echo** client base with a combination of best in class software and hardware. It offers our clients the opportunity to utilize these services during harsh economic times, where capital budget funding is difficult to obtain" said Mr. Littrell. "Our solutions have helped our clients improve access, direct consumers to the most appropriate level of care, build a strong consumer base, manage providers and quality, and ensure patient safety," Littrell said.

HealthLine Systems client base represents hundreds of distinguished healthcare organizations in 50 states and Canada. Incorporated in 1985, **HealthLine** is privately held and based in San Diego, California. **HealthLine** is committed to provide peerless information management solutions to maximize the quality and delivery of healthcare services through technological innovation.
